

## Problem A. Weird Algorithm

**Time limit** 1000 ms

**Mem limit** 524288 kB

Consider an algorithm that takes as input a positive integer  $n$ . If  $n$  is even, the algorithm divides it by two, and if  $n$  is odd, the algorithm multiplies it by three and adds one. The algorithm repeats this, until  $n$  is one. For example, the sequence for  $n = 3$  is as follows:

$$3 \rightarrow 10 \rightarrow 5 \rightarrow 16 \rightarrow 8 \rightarrow 4 \rightarrow 2 \rightarrow 1$$

Your task is to simulate the execution of the algorithm for a given value of  $n$ .

### Input

The only input line contains an integer  $n$ .

### Output

Print a line that contains all values of  $n$  during the algorithm.

### Constraints

- $1 \leq n \leq 10^6$

### Sample

Input	Output
3	3 10 5 16 8 4 2 1
